The vision of the School Nutrition Association of Louisiana is to ensure that every student has access to nutritious meals at school, ensuring their optimal health and well-being. SNAL 2023 is designed for us to not only meet the goals set forth to achieve the vision, but to surpass them by solidifying our association as purposeful voice for transformation and connection in shaping child nutrition program policy and operations. Our SNAL 2023 Conference Planning Committee is extending a special invitation for you to join the members of the School Nutrition Association of Louisiana in looking towards our **BRIGHT** future because School Nutrition Employees are **Bold, Resilient, Innovative, Gracious, Hardworking and Talented**. Supervisors, Directors, Purchasing Agents, Managers and Technicians from across our great state will meet in Monroe, **June 27-29, 2023**, at the Monroe Civic Center. Our committee has been diligently planning education sessions, hands on training and social events to make this an exciting and memorable 68th Annual Conference.

SNAL would like to thank all of our participants for their continued support that enables us to fulfill the mission and vision of our organization. We would not be able to offer training programs and services if it were not for committed exhibitors like you. If you have not exhibited with us before, we would like to extend an invitation to join us this summer in Monroe. An audience of dedicated child nutrition professionals will be in attendance to learn how your products and services can help create a safe, healthy and nutritious environment for the children of Louisiana. Through your support, we look forward to learning new ways to enhance our programs to **Ensure a Bright Future for the Child Nutrition Program**.

Special Electrical Connections: Two Legs of Three Phase Power are used to derive "220 volt" receptacles and will actually supply 120 / 208 volts. Some appliances require the higher voltage of single phase power (230-240 volt AC) or may take longer to heat at 208 volts AC. Please specify below the required amperage (current draw) of the appliance to be connected and the type of receptacle required for connection. (Example: 50 amp NEMA 1450; which is the standard receptacle used for kitchen stoves and recreational vehicles). If equipment is to be hard wired into the power service, please specify the amperage and indicate hard wired for the connector choice. Three phase connections are also available but these must be hard wired. **If you have any questions regarding electrical connections, please call Chris Kidd, Technical Director at 318-329-2343. Email: chris.kidd@ci.monroe.la.us**
