The National Emissions Inventory (NEI) assessment performed to support development of general p
Country uses the U.S. Environmental Protection Agency's (EPA's) 2011 Facility NEI v1 database
(http://www.epa.gov/ttnchie1/net/2011inventory.html). The analysis included only facilities in the
(latitude and longitude). Facilities without coordinates were not included. The basic steps for the ar

The facilities were extracted from the 2011 facility NEI v1 based on NAICS codes. The EPA h
each source category for which we are proposing a general permit/permit by rule. These ba
codes used for this data extraction.

The facilities were then imported into ArcGIS. Facility points were coded to note whether th
area (NAA), and, if so, the classification of the NAA for a given facility. This step was perforn
emitted by the source and regulated under the New Source Review program. The backgrou
http://www.epa.gov/air/tribal/tribalnsr.html detail which criteria pollutants are of concern
on the nonattainment boundaries used in this analysis can be found at: http://www.epa.go

After coding facilities with attainment status, the information was imported into a spreadsh
calculated by attainment versus nonattainment area status and classification, and proposed
criteria pollutant.

The results of this analysis are provided under tabs entitled "Results".

The additional tabs in this spreadsheet represent intermediate steps necessary to complete the calc
above.

permits and permits by rule in Indian
